

TLW Condition Monitoring

Feel the pulse of the machine

Make downtime plannable!

Gearboxes and bearings are constantly exposed to high loads. Their proper functioning is essential for the efficient operation of the wind turbine.

Have these components monitored without losing important time yourself:

Condition Monitoring by TLW

TLW Condition Monitoring in brief:

- Up to 8 measuring points on gearbox and bearings
- Only supply voltage required, Internet and server connection through TLW
- High-precision measurement of vibrations through precise sensor technology
- Direct connection to the control system from TLW
- Automatically generated messages with direct dispatch by e-mail
- Installation and setup by TLW

Due to the adaptive and flexible design of the system, retrofitting is possible on almost all system types in just a few steps.
