

TLW GridControl

Telecontrol made easy!

Keep control of your Grid Station!

Regardless of whether it's a customer station or a generation plant, in medium voltage, every fault is costly.

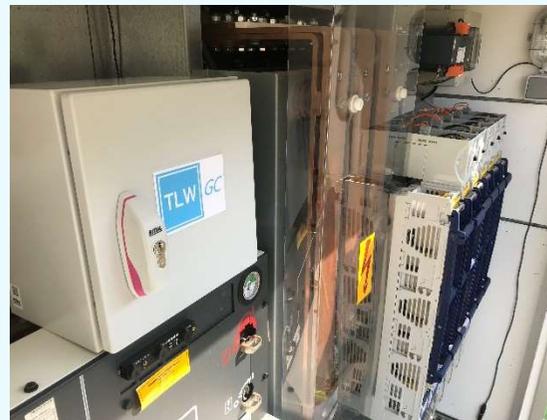

So monitor your station today with **TLW GridControl** !

TLW GridControl briefly summarized:

- Installation in medium voltage station
- Only supply voltage required, Internet and telecontrol connection through **TLW**
- 6 digital warning and fault message inputs
- 2 potential-free changeover contacts, remote controllable
- Monitoring by **TLW Control Centre** with automated control system in 24h operation
- Customer alerting possible via multiple channels
- No customer-owned IT hardware required

Avoid unnecessary circuit breaker tripping and associated mains failures through the detection of Protection- and UPS-fault messages.

By monitoring these and other messages, you get a direct picture of what is happening in your station, even at great spatial distances

We would be happy to discuss the implementation in your facility with you.
